Art Unit: 2816

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. Claim 1 is objected to because of the following informalities: in claim 1, line 10, --a-- should be inserted before the word "voltage". Appropriate correction is required.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Voorman.

As to claims 1-3, note figure 7, where the operational amplifier is element 10; the feedback capacitor is the capacitor connected between output terminal 4 and input terminal 6 (mislabeled as R44); the resistor recited on line 6 of claim 1 is the resistor R44 connected between output terminal 4 and input terminal 6; the second capacitor is C45 connected between output terminal 4 and

the inverting input -Uin; and the second resistor is R45 connected between capacitor C45 and output terminal 4. As to claims 4-6, the recited environments are merely intended use and therefore cannot be relied upon to define over Voorman.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

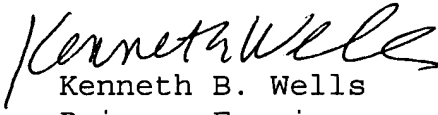

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth B. Wells whose telephone number is (571)272-1757. The examiner can normally be reached on Monday through Friday from 8:30am to 5:00pm.
